# Concentric Positioning and Clamping Elements
with variable range of clamping, hydraulically operated double acting, max. operating pressure 500 bar
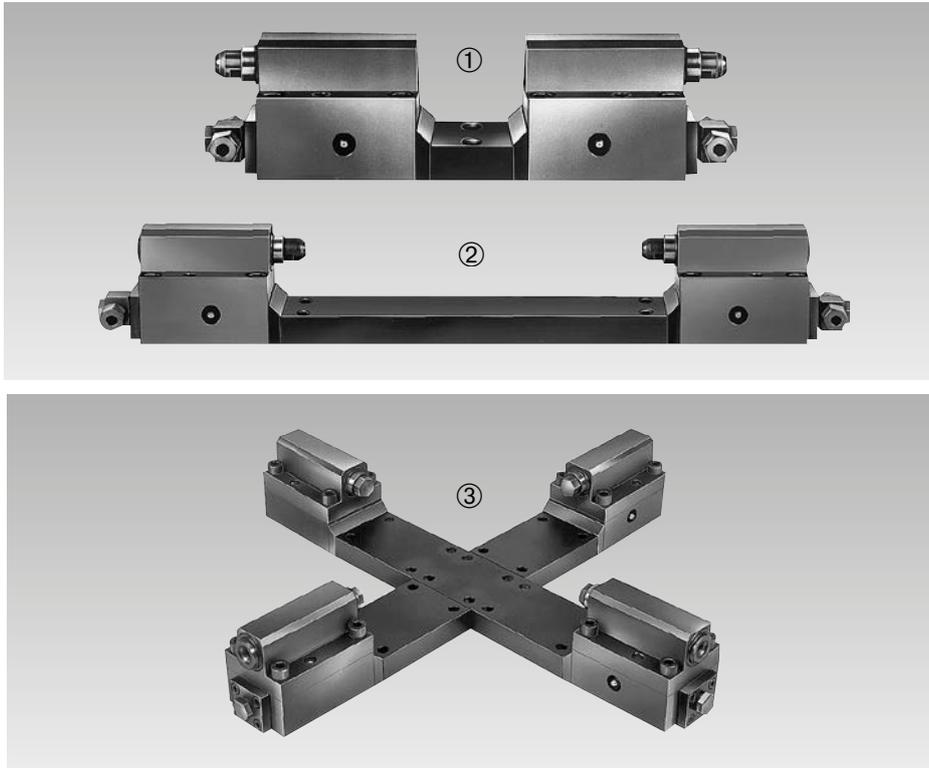

Figures

① Double clamping element for concentric interior clamping

② Double clamping element with prolonged connecting bar for exterior clamping

③ By means of the double clamping elements modular fixtures can be composed which position and clamp concentrically in several dimensions, e.g. in direction of the x- and y-axis.

Description

Concentric positioning and clamping with two or three-jaw chucks on stationary fixtures is nothing new. In many applications, however, it is not possible to place the relatively large chuck bodies on the fixture. Often the smaller clamping strokes are an additional obstacle.

In our development, the individual parts can be connected to a two or multiple-element version. In the multiple-jaw version, each pair of jaws clamps independently of the remaining ones, thereby concentric clamping is obtained.

The opening can be determined by means of a connecting bar. The clamping strokes of the several sizes are designed such that manual or automatic loading and unloading can be effected to clamp blanks with large tolerances. Also single-acting elements are available on request.

Active principle

Element, left-hand   Element, right-hand

Connecting bar complete
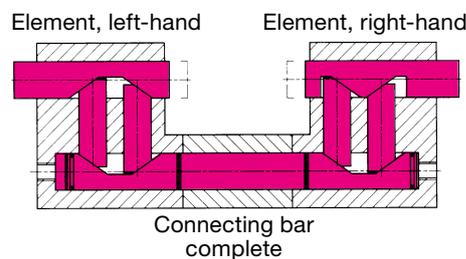

Clamping possibilities

Exterior clamping

Interior clamping
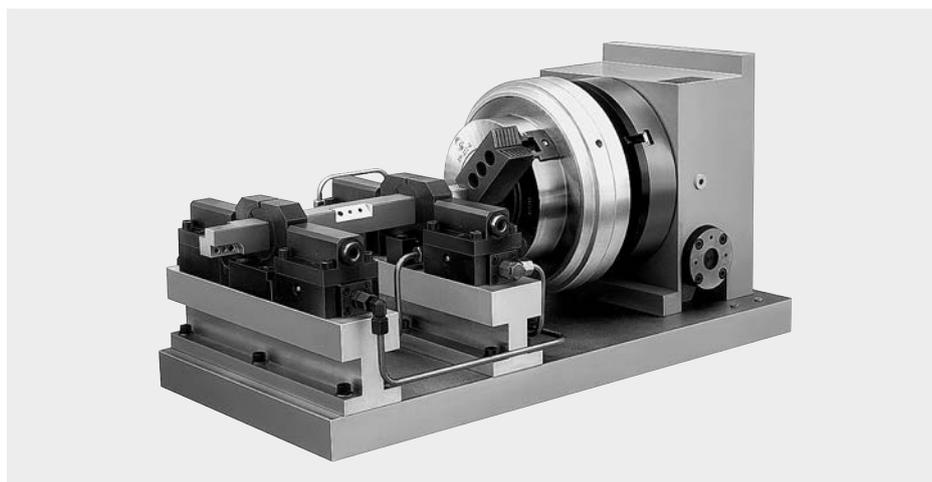

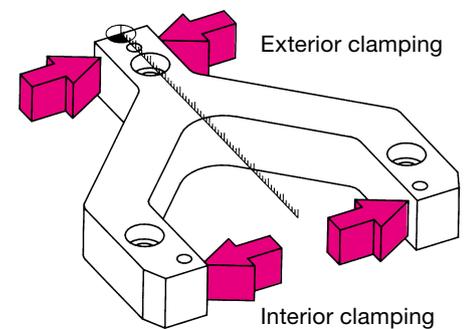

Application example

The flexible clamping unit is used to clamp bars which can be machined in every position, e.g. drilled, milled, threaded, etc.

In conjunction with a pneumatic two-jaw chuck the rotary indexing table is used to determine the machining position of the workpiece.

The two-jaw chuck and the right-hand concentric clamping element keep the bars in the exact working position.

The floating clamping element in the centre supports the bar. For this purpose it must work in a floating way, that means without centring function, what can be obtained by omitting the connecting bar.

min. 30
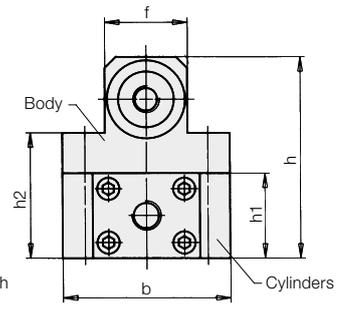

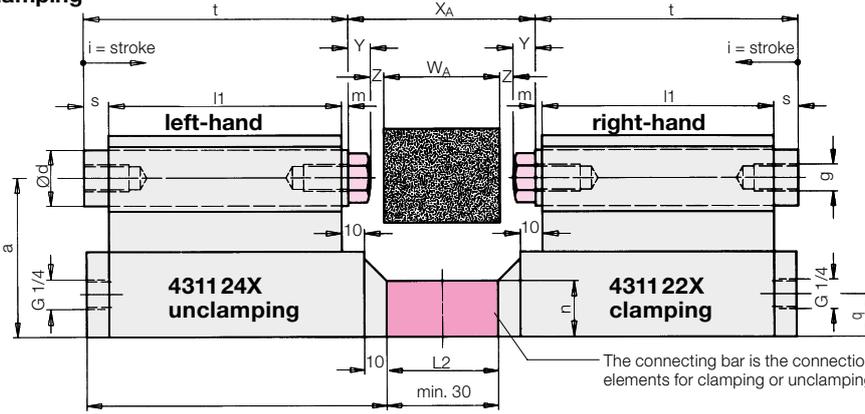

The connecting bar is the connection of both elements for clamping or unclamping

Body

Cylinders

u = Counterbore for socket head cap screw DIN 912
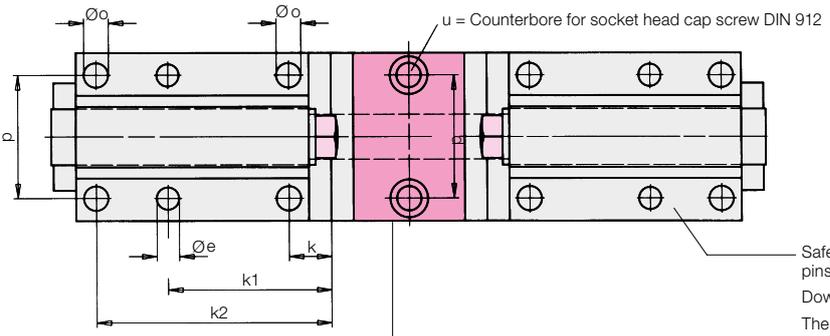

Safety device for transportations by dowel pins (hold body and cylinder together)
Dowel pins see accessories
The elements should only be pinned when the workpiece is exactly positioned and clamped.

Connecting bar, complete
Part no. 0432XXX   Please specify when ordering: 1. Size   D16 / D25 / D32
    2. Length of connecting bar   L2 / L3 / L4 = ___ mm
After ordering a connecting bar, you will receive an installation drawing that shows the position of the fixing screws.

Calculation of the length of connecting bar L

Size	2 elements	3 elements + crossing for 3 elements	4 elements + crossing for 4 elements
D 16	$L2 = X2_{I/A} - X2\min_{I/A} + 30$	$L3 = \dfrac{X3_{I/A} - X3\min_{I/A}}{2} + 24.2$	$L4_{a/b} = \dfrac{X4_{I/A\,(a/b)} - X4\min_{I/A}}{2} + 20$
D 25	$L2 = X2_{I/A} - X2\min_{I/A} + 30$	$L3 = \dfrac{X3_{I/A} - X3\min_{I/A}}{2} + 26$	$L4_{a/b} = \dfrac{X4_{I/A\,(a/b)} - X4\min_{I/A}}{2} + 20$
D 32	$L2 = X2_{I/A} - X2\min_{I/A} + 30$	$L3 = \dfrac{X3_{I/A} - X3\min_{I/A}}{2} + 26$	$L4_{a/b} = \dfrac{X4_{I/A\,(a/b)} - X4\min_{I/A}}{2} + 25$

Dimension X... for

Interior clamping	$X2_I = W_I - 2Y - 2Z$	$X3_I = W_I - 2Y - 2Z$	$X4_{I\,(a/b)} = W_{I\,(a/b)} - 2Y - 2Z$
Exterior clamping	$X2_A = W_A + 2Y + 2Z$	$X3_A = W_A + 2Y + 2Z$	$X4_{A\,(a/b)} = W_{A\,(a/b)} + 2Y + 2Z$

W_I, $W_{I\,(a/b)}$ = workpiece inside dimension
W_A, $W_{A\,(a/b)}$ = workpiece outside dimension
(a/b) = only applies to crossing for 4 elements
For rectangular section (a x b) two different lengths of connecting bars L_a and L_b are required

$X2\min_I$, $X3\min_I$, $X4\min_I$ = minimum dimension interior clamping (chart)
$X2\min_A$, $X3\min_A$, $X4\min_A$ = minimum dimension exterior clamping (chart) (bolt retracted without contact bolt)

Y = height contact bolt

Z = ideal stroke per clamping bolt up to the workpiece (< clamping stroke)
